

Project: Exploring and clustering restaurants data on FourSquare API in Bangalore

Introduction

The objective of this project is to understand the type of restaurants and the options available to the tourist and the foodie in the Bangalore, India. We will attempt to cluster the restaurants based on the feedback(rating if available on the data) received.

Interest

The outcome will be best suitable for starting new business and for the food explorer who really cannot explore food at the current situation. However, we can come to a conclusion at the end of the project.

Data

We will attempt to use the FourSquare API as the primary data source to generate data. If required we will use Wikipedia
